

COVID-19 Death Rate Analysis using Python

Project Overview

This project analyzes global COVID-19 data to understand death trends, mortality rates, and country-wise impact using Python.

Technologies Used

- Python
- Pandas
- NumPy
- Matplotlib
- Plotly
- Google Colab

Features

- Data Cleaning
- Death Rate Calculation
- Country-wise Analysis
- Top Affected Countries
- Data Visualization

Dataset

Kaggle COVID-19 Coronavirus Dataset

Key Insights

- Calculated global death rates
- Identified highly affected countries
- Visualized daily death trends
